

FORM-IT

INFORMATION

These machines are available in 2 sizes and are also available with the option of an integrated heating system to allow for faster curing.

The membrane press has swiftly become one of the most common machines found in many shopfitters and furniture makers workshops where the need to construct 'aesthetically pleasing' furniture has become more of a necessity. These machines are typically used to create curved structures as well as veneering and laminating curved surfaces.

Not only are these machines found in the woodworking industry but they are also used in the plastics and composite materials industries too.

Model	Form-it 3000	Form-It 3500
