

REFINER

INFORMATION

The refiner is to all intense and purposes a mini shredding machine and is ideally suited to waste which is larger than traditional sawdust or shavings, for example off a tenoner or a wood lathe. The refiner is also ideally suited for use in conjunction with a shredding machine as waste from a shredder can often be longer than the screen size which is not ideal for briquetting and it will also allow the shredder to be fitted with a slightly larger screen to allow a higher throughput.

Ideal screen size for briquetting is 8mm which is fitted to the refiner.
